

Lab 5 – Lab 5 – Entity Framework, Group B: Song List

CS295N, Web Development 1: ASP.NET

Objectives

Gain experience:

- Using Entity Framework
- Creating Scaffolding

Song List Web App

Write a song listing web app that allows users to:

- Display all the songs in the list
- Add a song
- Change the information about a song
- Remove a song from the list

Store the following information about each song

- | | |
|--------------------------|-------------------------------------|
| • Title | • Date first performed or published |
| • Who wrote the lyrics | • Artist |
| • Who composed the music | • Album |

The system should remember the artist and album from the previous entry and suggest them on the “Add a song” page.

Clean up the code generated by the scaffolding. For example, labels and text on the pages should be in correct English (not using property names) and users should be asked for just dates, not date and time.

Submission to Moodle

Beta Version

Upload the following to the Code Review Forum:

1. A zip file containing your web app’s Visual Studio solution folder.
Or, a link to a repository containing your web site solution source code. You can put the link on the same document with the report on your exercise from part 1.
2. A code review of your lab partner’s work. (You do this after your lab partner submits item 1 and you have reviewed it.)

Production Version

1. Item 1 as above but revised as needed.
2. Item 2 above.
3. The code review of your work (the one done by your lab partner) with the second column (“Production”) completed by you.
